

University of Bucharest Postgraduate Studies

The University of Bucharest: A Brief Introduction

Within Romania and abroad, the University of Bucharest is generally considered to be the country's leading educational and research institution. Successive generations of students and teachers have succeeded in establishing it as a point of reference for the whole Romanian society.

Degrees awarded by the University of Bucharest are recognized in most countries of the world. Today the University has about 30,000 students. They can choose from among some 60 long-duration programmes, 22 short-duration programmes, 12 long-duration distance-learning programmes, over 100 master's degree and advanced study programmes, over 50 doctoral programmes, and programmes of professional conversion and perfection. The University also organises programmes of study in collaboration with leading universities in other countries; graduates of these programmes receive degrees both from the University of Bucharest and from the partner university.

The University of Bucharest is one of the most important centres of scientific research in the country. There are over 50 institutes, departments and research centres functioning within the University, most of which work in collaboration with similar centres in other countries. In recent years, our institution has repeatedly taken the first prize in national competitions for research funds. Some of the research centres have been recognised as centres of excellence at European level.

The University of Bucharest has been and continues to be the initiator of a set of major measures for the reform and development of the higher education system, which have been successfully adopted by other universities in the country, and in some cases have led to the elaboration of new laws and national regulations. In 2000, the University of Bucharest has received the Diploma of Excellence offered by the Ministry of Education.
